I Level University Master in "Aviation: Sustainable Development Goals"

This I level Master's Course is an University and highly professionalizing training course, designed to ensure an advanced, interdisciplinary education on legal-economic-managerial and technical-engineering aspects of aviation.

It aims to reach an ambitious objective: to train professionals, able to carry out managerial functions in the aviation industry, not following a purely business logic or an approach focused on short-term results, but according to sustainable development principles, aimed at reconciling economic, social and environmental aspects.

In fact, this training Course aims to fill a gap, currently present in the labour market, in which often operate managers who do not have a particular sensitivity and specific training for sustainability.

Teaching activities will always be mainly practical, so that the case studies that will be discussed can be applied to the real working context.

The Master also aims to provide detailed information and ensure continuous updates on current developments in the airline industry.

Particular attention will be paid to the regulatory framework at international and EU level, also studied in the light of the policy documents drawn up with the aim to reduce the cost of operations, while maintaining high levels of safety and respecting the environment.

STRUCTURE OF THE COURSE

Duration: 1 year

Delivery mode: part-time distance learning
(formula weekend)

Didactic modules: 20

Language of instruction: English

Internship/traineeship: mandatory

Fees: 3000,00 €

Applicants: both Italian and international students

Start date: February 2026

Academic year: 2025/2026

LEARNING OBJECTIVES

After having successfully completed this Course, participants will have:

- a Master's University Diploma, relevant to their professional development;
- a high level, interdisciplinary education, needed to respond to global aviation market demands;
- the (legal, economic and technical) skills to estimate plans, programmes and projects and to make choices that presuppose a specific competence in economic, social and environmental sustainability issues applied to the aviation sector.

TARGET POPULATION

This Master's Course is for anyone aspiring to become manager/executive, senior official with responsible tasks in airlines, airport, handling companies and other public/private entities operating in this field.

The Master is also designed for those who already work in this sector and wish to develop their career in medium and large companies or who want to upgrade and to be able to add value in the company, implementing sustainable business models.

REQUIREMENTS:

- a bachelor's degree consistent with the Course contents
- a good command of English (B1 level or higher)
